1461794001 Wireless Charging Coil - Dual Band, NFC, Low Frequency Receive

1.0 SCOPE

This Product Specification covers the environmental and mechanical performance requirements for Wireless Charging Coil - Dual Band, NFC, Low Frequency Receive.

2.0 PRODUCT DESCRIPTION

2.1 Product Name

Wireless Charging Coil - Dual Band, NFC, Low Frequency Receive

2.2 Product Description

This high efficiency coil is made of copper flexible circuit and ferrite shield, and designed for high performance mobile phones, handheld mobile terminals or any other device / accessory requiring up to 5W power receive for low frequency PMA or Qi standards. Standard FPCB construction enables integration with other electronics, high durability, and high yield manufacturing and consistent performance.

2.3 Series No.

146179

2.4 BOM

PRODUCT SPECIFICATION

6.0 PACKAGING REQUIREMENT

6.1 Packaging Method

Please refer to Molex packaging drawing for the details at www.molex.com

6.2 Packaging Test

Packaging test method refers to Molex documents of IEP-02 & ES-4000-7001:

ITEM	DESCRIPTION	TEST CONDITION	ACCEPTANCE CRITERIA
6.2.1	Drop Test	<ul style="list-style-type: none"> ➤ Drop height: 120 cm ➤ Packed carton box with full product for sufficient gross weight. ➤ Cycle: 1 Cycle ➤ Angle: Test in each ten (10) angles of the carton box onto the floor 	<ul style="list-style-type: none"> ➤ No Permanent Damage Visual / Mechanical ➤ No Appreciable Electrical Degradation Pre / Post Performance
6.2.2	Vibration Test	<ul style="list-style-type: none"> ➤ Test Method: ASTM 5112 or ISO 2247 or ISTA 2A or JIS Z 0200 or equivalent ➤ Start the test machine to vibrate at 25.4 mm / 1 inch total displacement. ➤ The frequency should be 240 cycles per minute and 4.0 Hz with a maximum acceleration ± 10.78 m/s² (± 1.1 G) 	<ul style="list-style-type: none"> ➤ No Permanent Damage Visual / Mechanical ➤ No Appreciable Electrical Degradation Pre / Post Performance

7.0 OTHERS

Store in package or tightly re-closed box with the following conditions:

Temperature: -10°C to +40 °C

Humidity: 15 % to 85 % RH

Check the terminal function before use, if the product has been stored for more than 6 months.

8.0 DEFINITIONS FOR REFERENCE

Equivalent Series Resistance (ESR): resistance measured at or around the operating frequency. ESR accurately characterizes any losses such as skin effect or proximity effect and any additional effects that may occur in the presence of material such as shielding, metal backing, or the housing. Comparison of coil assembly and in situation ESR measurements can

accurately determine sources of loss. This metric should be given serious consideration during product selection to ensure full characterization of system electrical parameters.

Direct Current Resistance (DCR): resistance measured at DC or measured at very low frequencies (60 Hz - 100 Hz) and is often considered an incomplete measurement in wireless charging environments because it does not take into account actual causes of resistance during operation. NuCurrent recommends ESR as the most relevant measurement of resistance in a wireless power coil, but provides DCR values as well.

PRODUCT TUNING: Tuning is a critical aspect that greatly impacts system performance. The receiver coil should be placed in the final housing, placed on desired charging surface, and have situational inductance, L_s' , measured. The necessary tuning capacitor values can be calculated using Equation 1:

$$C_{tune} = \frac{1}{(2 * \pi * f)^2 * L_s'} \quad (1)$$
