

STEVAL-CDE001V1

Embedded web server based on the ST72F321M9 microcontroller

Data Brief

Features

- Provides temperature measurements in the range of -55 °C to 150 °C
- Ethernet interface to the webpage based temperature display on computer terminal
- 2x16 dot matrix interface LCD module
- Switches are provided for user interface
- 10 pin ICC programming/debugging connector
- SCI interface for testing purposes
- 1 Mbyte serial Flash for storage of webpages having larger memory requirements

Description

This evaluation board is able to offers a temperature display via LCD on the board and on a webpage via Ethernet connection. The board acts as a server to provide temperature information on a webpage displayed on the client end. Is also able to measure the temperature from a remote region and send it to a computer unit and then provides the solution for central server-based temperature measurement of various terminals as in applications such us air conditioning control in the industrial sector and hospitals.
